1. General information on application of ZPU Międzyrzecz sp. z o.o. double preinsulated pipes and fittings

Double preinsulated pipes and fittings by **ZPU Międzyrzecz Sp. z o.o.** are intended for the construction of thermal distribution networks, whose function is to transmit a heating medium from its source up to the reception point. Double preinsulated pipes and fittings are resistant to the medium with maximal working temperature of up to 165 °C predicted for thirty-year lifetime.

The function of double preinsulated pipes and fittings manufactured by **ZPU Międzyrzecz Sp. z o.o.** is to transmit a heating medium, characterised either by high and low working parameters, or other media used for process or construction purposes.

Double preinsulated pipes and fittings by **ZPU Międzyrzecz Sp. z o.o.** are composed of a two steel pipes placed inside a single casing pipe made of hard polyethylene of high density (PEHD) and a layer of thermal insulation: standard, standard plus or plus plus, made of rigid polyurethane foam (PUR) filling up the space between the pipes. **ZPU Międzyrzecz Sp. z o.o.** preinsulated pipes, used in the transmission of hot water, are manufactured within the nominal diameters of DN 2×20 to DN 2×250 mm, in standard lengths of 6m, 12m and 16m¹. The ends of pre-insulated pipes and fittings are not insulated at a length of 150 mm ± 10 mm with diameters up to 2xDN 200 and at a length of 200 mm ± 10 mm with a diameter of 2xDN 250.

Pipes can be produced by the continuous method (with or without an aluminum barrier) up to the diameter of the casing pipe Dz 355 mm and by the injection and foaming method of PUR foam components in the full range of diameters.

ZPU Międzyrzecz Sp. z o.o. double preinsulated pipes and fittings meet the requirements set down by standards: PN-EN 253, PN-EN 448, PN-EN 488, PN-EN 489, PN-EN 13941 i PN-EN 14419.

All preinsulated pipes and fittings with two steel carrier pipes have couplings welded inside (anchors) and there is no need to use additional couplings in the coupling units.

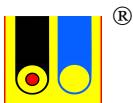

Tees are made in solutions in accordance with the PN-EN 448 standard, as directly welded, reinforced, with a "pull neck" and forged. As a standard, we produce tees as directly welded, while for tees where the diameter of the branchings are the same - as forged tees.

In the case of fittings with a polyethylene barrier (thickened wall of a casing pipe), the product symbol is created by adding its wall thickness to the diameter of the casing pipe (eg II-K-20 + 20 (125 * 5.0) / 90°, etc.).

The suitability of the construction element referred to as: "Preinsulated pipes, fittings and coupling units **ZPU Międzyrzecz Sp. z o.o.** to underground heating networks" is confirmed by: National Technical Assessment ITB-KOT-2018/0286 edition 3, validity date 28 December 2028.

On individual customer's request.

2. Properties of Materials Used in Double Preinsulated Pipes and Fittings by ZPU Międzyrzecz sp. z o.o.

Carrier pipe

Carrier pipe is certified **seamless steel pipe, seamed or other**, made according to the contractor's order.

To increase the adhesion of rigid polyurethane foam (PUR) to steel pipes, the external surface of steel pipes is shot-blasted to SA 2 purity according to PN-EN ISO 8501-1.

The ends of the steel service pipes are prepared for bevelling according to PN-EN ISO 9692-1.

Thermal (heat) insulation

The insulation is made of rigid polyurethane foam (PUR), evenly filling the space between the pipes along the entire length, made in accordance with the requirements of PN-EN 253.

Casing pipe

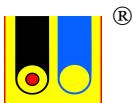

The casing pipe is made in accordance with the requirements of PN-EN 253 with high-density polyethylene (PEHD) in the PE 100 class.

The inner surface of polyethylene pipes is activated by the electrocoronation method to increase adhesion of rigid polyurethane foam.

The protective casing of pre-insulated pipes, fittings, armature and joint units of the ZPU Międzyrzecz Sp. z o.o. system has a test confirming the use of the products for the construction of above-ground heating networks.

3. Pipe Insulation Moisture Detection System

ZPU Międzyrzecz Sp. z o.o. double preinsulated pipes and fittings can be equipped with any system detecting PUR insulation moisture, that is a pulse system (Nordic), resistance system (Brandes), or an HDW system or any system chosen by the customer. Such a system comprises wires embedded in the insulation layer. The system signals moisture spots in any place of the pipeline.

4. Cross-sections of Jacket and Carrier Pipes

ZPU Międzyrzecz Sp. z o.o. double pipes and fittings are manufactured from jacket and carrier pipes of the following diameters:

DN - steel pipe nominal diameter, Dz - external diameter, gp - wall thickness

Recommended diameters of preinsulated jacket pipes and fittings are given on further pages of the catalogue.

Tables show geometric dimensions for pipes and double fittings subject to standard production, if it is necessary to use products with other geometric dimensions, it should be individually agreed each time.

Specification of the ordered pre-insulated products should include the carrier pipe's steel grade (welded, seamless or other), type (series) of thermal insulation, type of moisture detection installation embedded in the polyurethane insulation or lack thereof, and in the case of pipes, also their length and use symbols specified in the catalogue.

Bend radius:

for diameters from DN 20 up to DN 40 - 3Dz

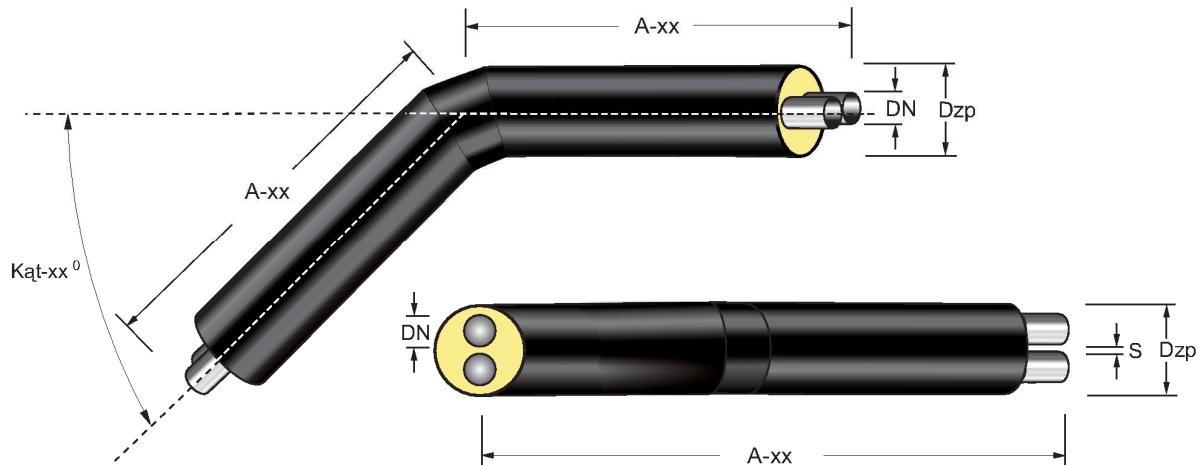

for diameters from DN 50 up to DN 250 - 2.5Dz

On customer's request, bends can be made with "hamburg" elbows or cold bent with any bend radius and other arms lengths and angles, as agreed between manufacturer and customer.

Note: when ordering, please describe the elbow with the symbol "K-A" - this applies to elbows assembled horizontally on the construction site.

6.2. XX° Elbow (any angle)

XX means any elbow angle specified by the customer (when placing an order)
- normally performed every 15° (15°, 30°, 45°, 60°, 75°)

Note: 1. Shut off ball valves can be manufactured in dimensions other than those in the catalogue, agreed between the manufacturer and the customer.

2. The above dimensions are for valves with a reduced bore. For full-flow valves, the dimensions are set individually.

Valves are manufactured as standard for a working pressure of min. 1.6 MPa. At the Customer's request, valves with other parameters indicated in the order are manufactured (e.g. full-bore valves for a working pressure of 2.5 MPa, etc.) The table provides the maximum dimension H, which may vary depending on the type of shut-off valve used (e.g. reduced-bore, full-bore, etc.) and depending on the supplier of the steel valve and the Customer's requirements.

2x150	450	480	700/600	1305	2127	2	II-NTX-II-150/480		

Note:

1. Sleeve is manufactured with adhesive and mastic.
2. Radiation cross-linked heat shrinkable sleeves length L tolerance is $^{+10}/_{-20}$ mm
3. Ovality - intolerant.
4. Hole diameter - 24 mm

The table shows the minimum external diameters of the sleeves.

We also manufacture larger sleeve diameters than those given in the tables above.

8.3. Electrically welded couplings

8.3.1 Electrically welded heat shrinkable coupling DT - closed type (*HDPE sleeve sealed with heat shrinkable band*)

* Table shows the minimum external diameters of the sleeves.

Oval - not tolerated.

We also manufacture larger sleeve diameters than those given in the tables above.

Note: Assembly of couplings is performed by an authorized service center of ZPU Międzyrzecz Sp. z o.o., with appropriate qualifications and equipment, or by the customer after appropriate training and obtaining a certificate issued by the couplings manufacturer.
